

Software Financing

When it comes to updating your school's software systems, there can be a lot to consider. Projects range from small, ongoing maintenance initiatives to larger, ERP implementations that require full system overhauls. And the upfront expenses that are typically associated with these types of projects tend to be costly and somewhat unpredictable.

ERP Software Upgrades

Bringing Predictability to the Unpredictable Costs of ERP Implementations

With most ERP implementations, many schools are left wondering how to pay for the large, upfront investments on top of the software licensing costs.

Most schools are unaware you can finance these implementation costs. Financing can be used as a vehicle to transform those large, upfront and unpredictable costs for new ERP system implementations into fixed, **predictable monthly payments** that are spread out over time. This means less surprises in your budget and better cash-flow.
